

Digital business transformation is changing the way businesses around the globe work, engage, and interact with employees and customers. This transformation is impacting technology. New applications, built on new cloud infrastructures, are the new norm. These new environments, like their predecessors, require security and compliance validation to protect the confidentiality, integrity and availability of data.

ArcaWorx is purpose built for Google Cloud Platform and Kubernetes to provide Cloud Security Posture Management (CSPM), Extended Detection and near real time Remediation (XDR) capabilities to protect your workload and assets in the cloud.

### ArcaWorx Suite of Products

ArcaScout is the CSPM arm of ArcaWorx focused on three key areas:

- Capture - Instant Graphical view of your cloud assets.
- Assess - Active validation of your cloud security and compliance
- Report - Compliance scorecard and custom reporting

ArcaKnight delivers XDR to remedy misconfigurations and violations found by ArcaScout through:

- Enforce - Automate or Manually enforce remediation policies

### ArcaWorx Key Benefits

Security Health  
at a glance

Always On  
Security Posture

Centralized Cloud  
Assets Visibility

Increased  
Compliance Governance

Reduced Deviation  
Detection Time

Faster time to  
Compliance

## ArcaScout Key Features
